REASONS FOR ALLOWANCE

Allowable Subject Matter

1. Claims 1-20 are allowed.
2. The following is an examiner's statement of reasons for allowance: none of the prior art of the record discloses or suggests excision system and method for performing frequency domain excision on a received signal including a desired wideband signal component, comprising: an excision processing component operative for each block of frequency-domain coefficients to: (i) morphologically filter the coefficients to generate a threshold function representing an estimate of the spectrum of the desired wideband signal component, the threshold function including a plurality of threshold values corresponding to the coefficients; and (ii) apply a gain function to each coefficient to generate an excised block of coefficients, the gain function for each coefficient having a fixed-gain region for input values less than the corresponding threshold value from the threshold function, an excision region for input values greater than a predetermined multiple of the corresponding threshold values, and a soft limiting region between the fixed-gain region and the excision region; an inverse transform component operative to perform the inverse of the transform function on the excised blocks of the coefficients to generate excised blocks of signal samples; and an inverse window component operative to apply an overlap-eliminating central portion of the inverse of the window function to each excised block of signal samples.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Blanchard et al (U.S. Pat. 5,629,929) disclose an apparatus for rapid interference cancellation and dispreading of a CDMA waveform.

Richardson (U.S. Pat. 6,246,729) discloses a method and apparatus for decoding a phase encoded data signal.

Mahoney (U.S. Pat. 6,360,369) discloses an interference tolerate modem.
